DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Evers (U.S. 5,300,358).

Evers discloses a composition comprising: a fluorochemical surfactant (col. 7, lines 47-53) which is capable of reducing a contact angle between water and the surface of the material (col. 7, lines 53-58) when the amount of surfactant increases.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Evers (U.S. 5,300,358), as applied to claim 1 above.

In regard to claim 2, Evers does not disclose the specific surfactant formula claimed by Applicant. However, Applicant himself disclosed that the surfactant claimed is commercially

available under the trade name of KH-10, 20, 30 and 40 from Asahi Glass K.K., and, therefore, being a well known material in the art, commercially available worldwide, its use would have been obvious to one skilled in the art at the time of the invention.

In regard to claim 3, Evers does not disclose that the resist composition is "of chemical amplification type". However, from the specification, it seems to the Examiner that this limitation means that the resist may be able to be exposed to high energy radiation. It is the Examiner's position that, even if Evers is silent as to whether or not his composition is "able to be exposed to high energy radiation", since both Evers' and Applicant's compositions are similar, then Evers' must also be able to be exposed to such energy radiation.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Vanessa Perez-Ramos whose telephone number is 703-306-5510. The examiner can normally be reached on Mon-Fri 8:30am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Benjamin Utech can be reached on 703-308-3836. The fax phone numbers for the organization where this application or proceeding is assigned are 703-305-7718 for regular communications and 703-305-3599 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-306-5665.
